

Should I stay or Should I Go?

From Threatening Emotion Perception to Avoidant Postural adjustments

C2S - URCA

Vendredi 20 Septembre

Jean Monéger

Theoretical Background

- Emotion As Social Information / Emotion is for Social Influence (van Kleef, 2009; van Kleef et al., 2011)

Theoretical Background

- Emotion As Social Information / Emotion is for Social Influence (van Kleef, 2009; van Kleef et al., 2011)
- Adaptive approach/avoidance response to positive vs negative faces? (Eliot & Covington, 2001; Bradley et al., 1990, 2001)
 - Positive = Approach
 - Negative = Avoidance
 - ==> **Mixed findings**

Theoretical Background

- Emotion As Social Information / Emotion is for Social Influence (van Kleef, 2009; van Kleef et al., 2011)

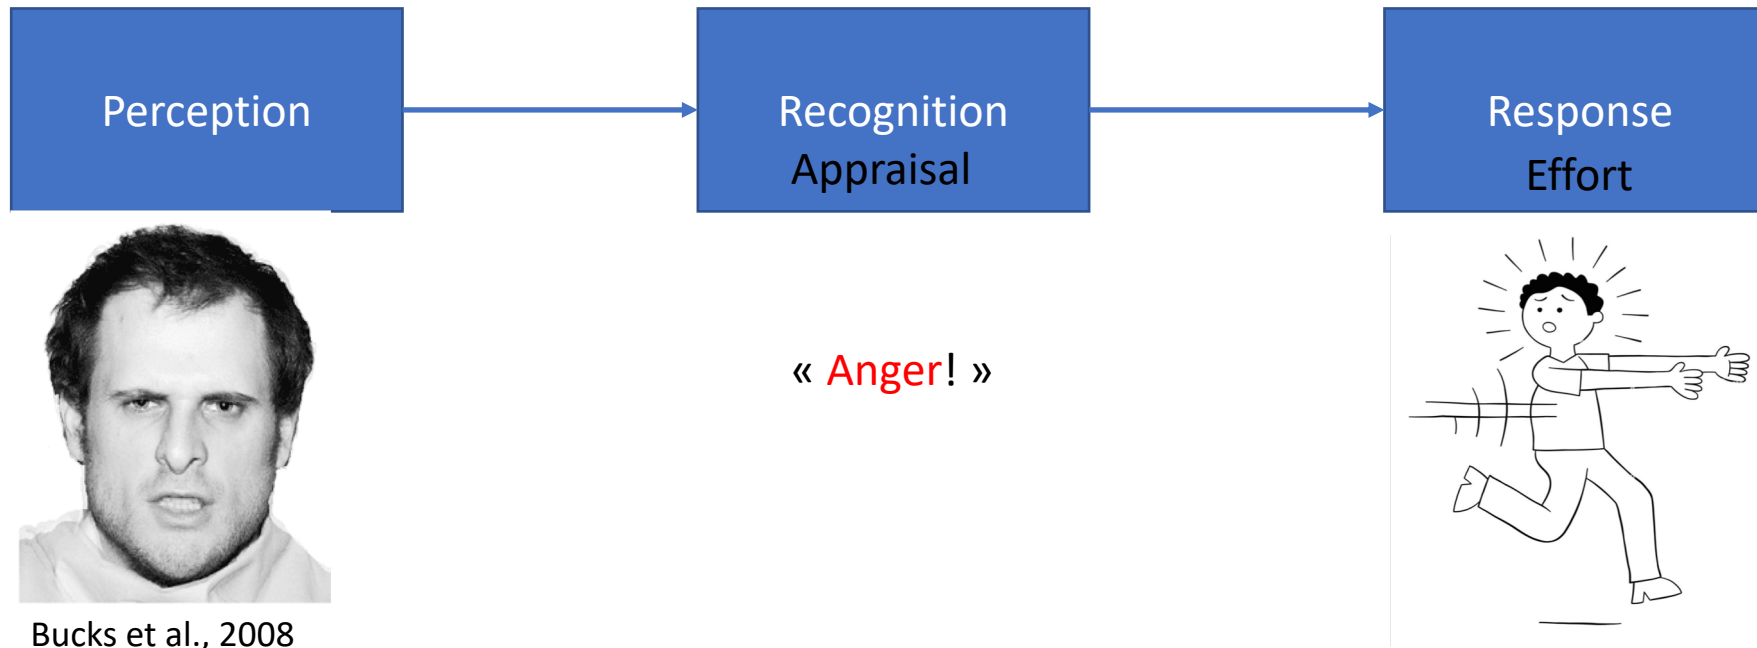

Angry faces = I'm going to punch you!

Fear faces = Please stay away from me!

Sad faces = Please help me

Reacting to a threatening face

- Adaptive distance regulation = **Perception-Appraisal-Response** process (~ Ochsner & Gross, 2014)

Gaze direction

- Direct = **I'm going to punch you!**

- Angry

- Deviated = I'm going to punch this broken car!

Gaze direction

- Direct = Please don't get near me!

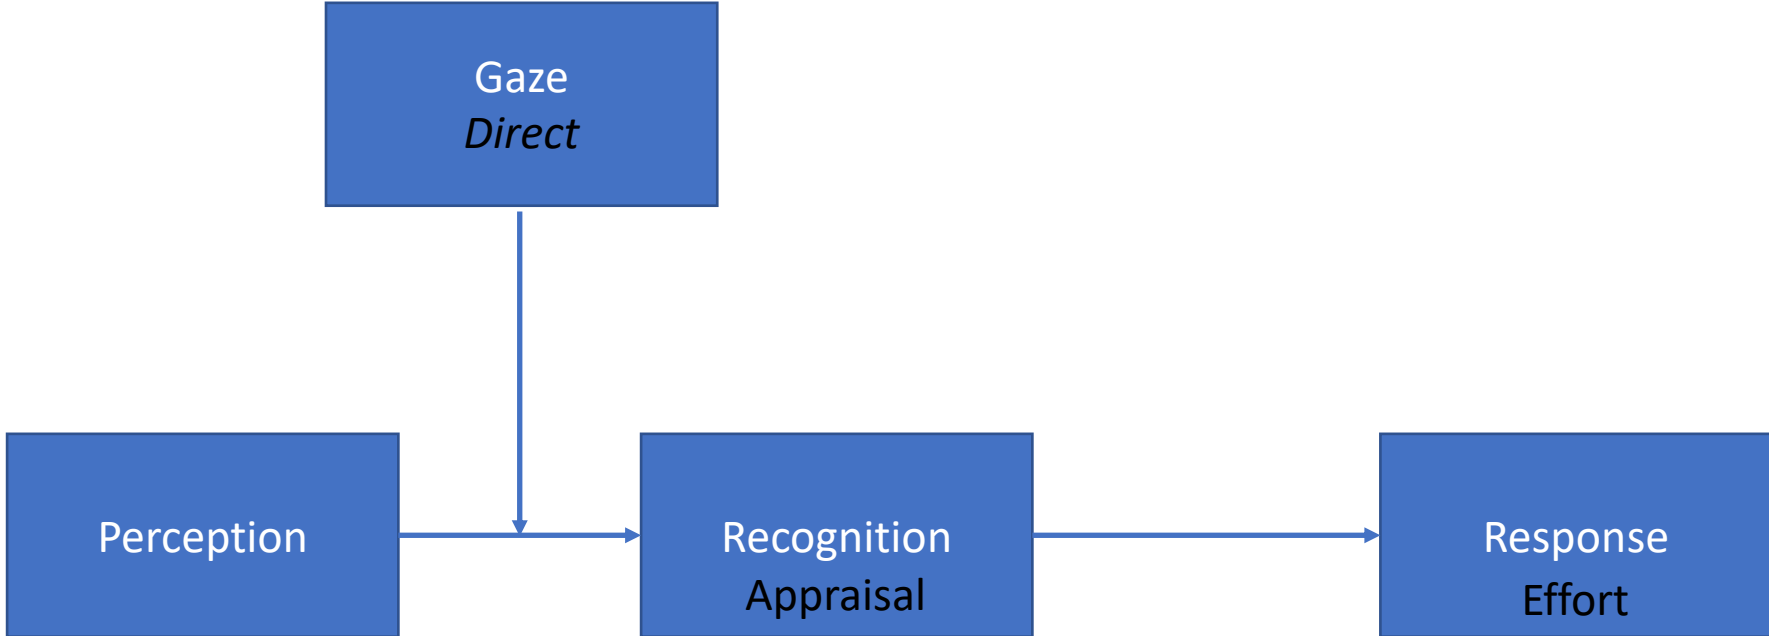

• Fear

- Deviated = **Watch out! A snake!**

The case of Direct Anger

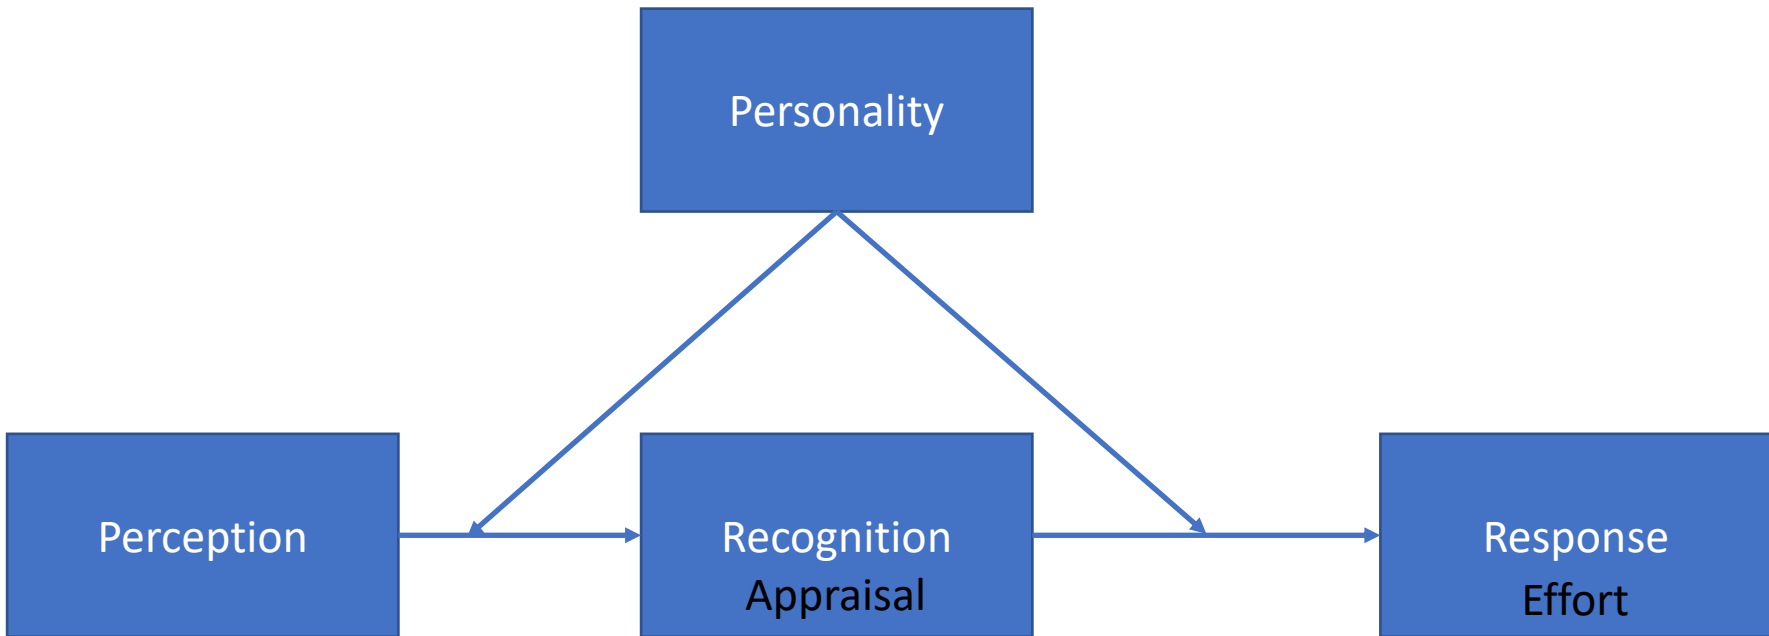

Bucks et al., 2008

« Anger! »

The case of Direct Anger

Bucks et al., 2008

« Anger! »

Big Five

→ *Do I care?*

*« Personality traits are probabilistic descriptions of **relatively stable patterns of emotion, motivation, cognition, and behavior**, in response to **classes of stimuli that have been present in human cultures over evolutionary time** »*
De Young (2015, p. 3)

Big Five

➔ *Do I care?*

*« Personality traits are probabilistic descriptions of **relatively stable patterns of emotion, motivation, cognition, and behavior**, in response to **classes of stimuli that have been present in human cultures over evolutionary time** »*
De Young (2015, p. 3)

- Traits are associated with cybernetic functions:
 - **Neuroticism** = Threat aversion
 - **Extraversion** = Reward sensitivity
 - **Agreeableness** = Cooperation facilitation/social coordination
 - **Openness** = Cognitive exploration/information engagement
 - **Conscientiousness** = Abstract / long term goal pursuit

Schizotypal personality

- A mild, non-clinical, form of schizophrenia

Schizotypal personality

- A mild, non-clinical, form of schizophrenia
- Associated to deficits in **emotion recognition** (Zouraraki et al., 2023)

Schizotypal personality

- A mild, non-clinical, form of schizophrenia
- Associated to deficits in **emotion recognition** (Zouraraki et al., 2023)
- Tendency to **perceive averted gazes as direct** (Wastler & Lenzenwager, 2018)

Schizotypal personality

- A mild, non-clinical, form of schizophrenia
- Associated to deficits in **emotion recognition** (Zouraraki et al., 2023)
- Tendency to **perceive averted gazes as direct** (Wastler & Lenzenwager, 2018)
- **3 dimensions**
 - Cognitive perceptive dimension
 - Ideas of reference, Magical thinking, and unusual perceptual experiences*
 - Disorganization dimension
 - Odd speech and behavior*
 - Interpersonal dimension
 - Paranoid ideation, Social anxiety, No close friends*

To sum up

- Reacting to a threatening emotional expression requires
 - **identifying the social message behind the observed expression**
 - *that can be modulated through gaze direction*
 - **identifying its relevance for individuals**
 - *determined by personality traits, e.g., neuroticism regulating threat-sensitivity*

Body sway

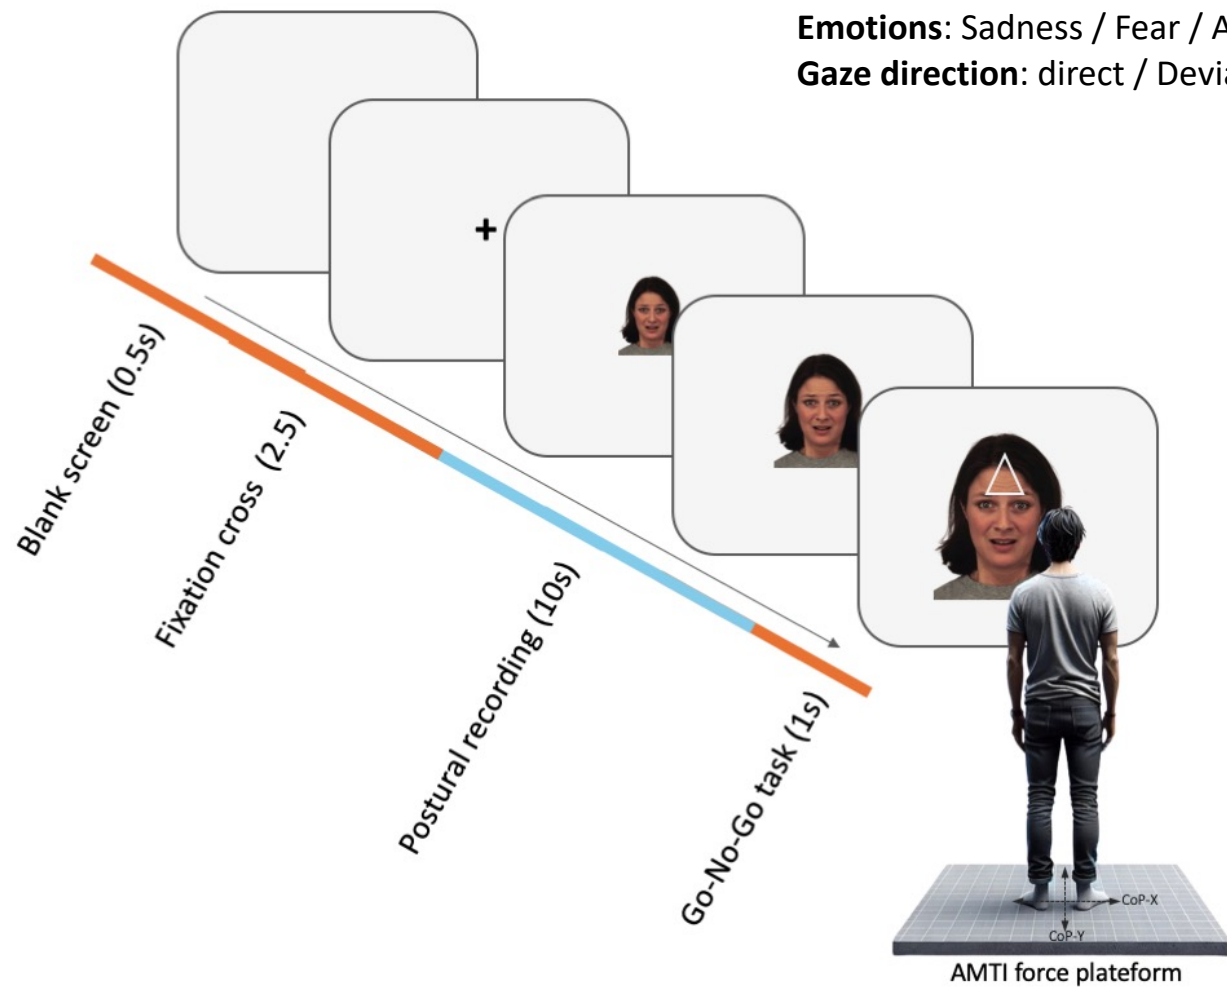

- Not Instruction based
- Natural/ecological behaviors
- Likely automatic (uncontrollable, indirect, unconscious)

Posture

40mn

Emotions: Sadness / Fear / Anger / Neutral
Gaze direction: direct / Deviated / Ambiguous

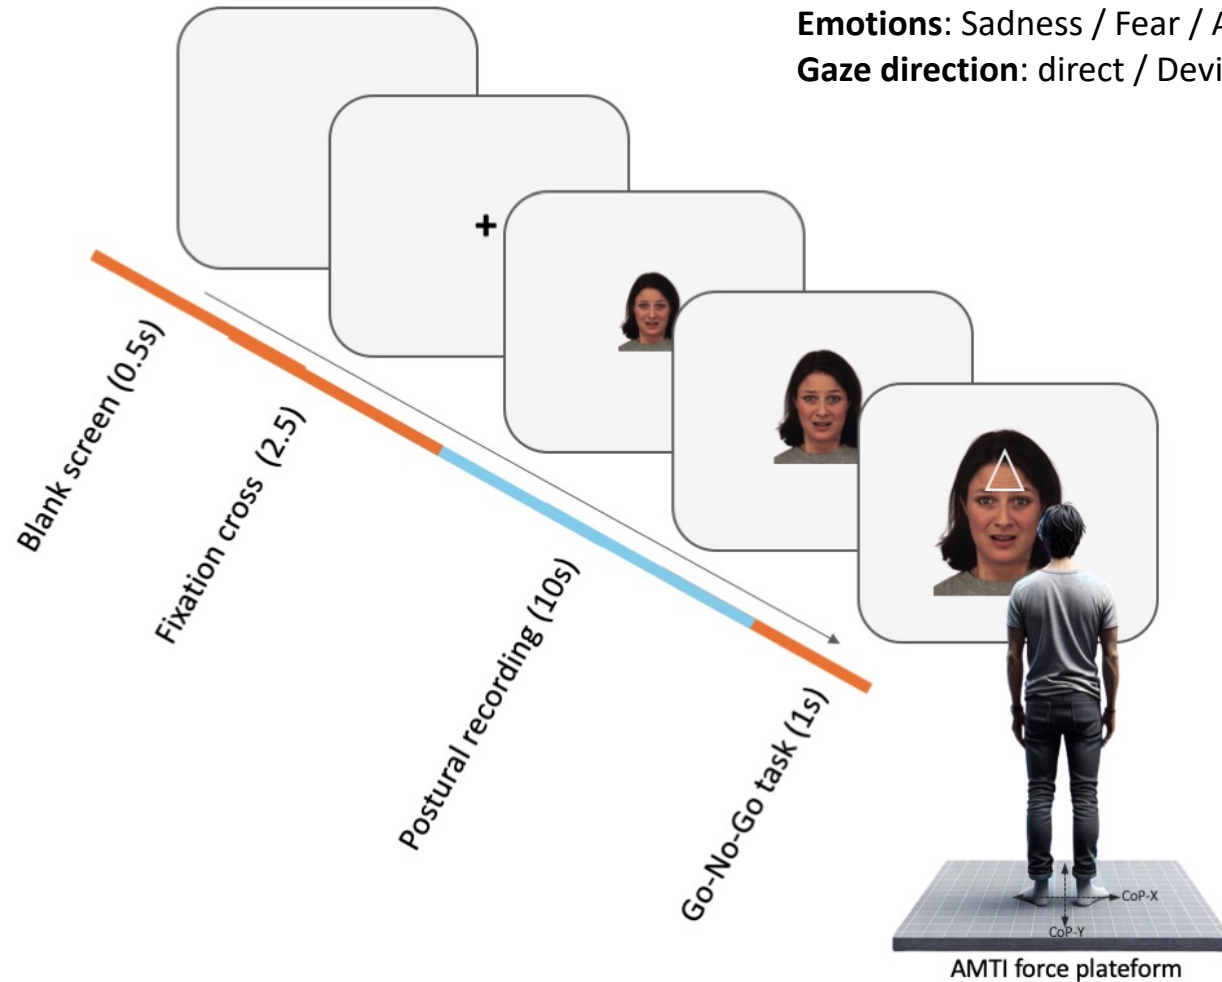

Posture

40mn

Personnalité

20mn

Questionnaires:

HADS (Anxiety and depression)
SPQ-Br (Schizotypal personality)
BFI-10 (Big 5)

+

Perception stimuli

- Evaluation of emotion
- Evaluation of gaze direction

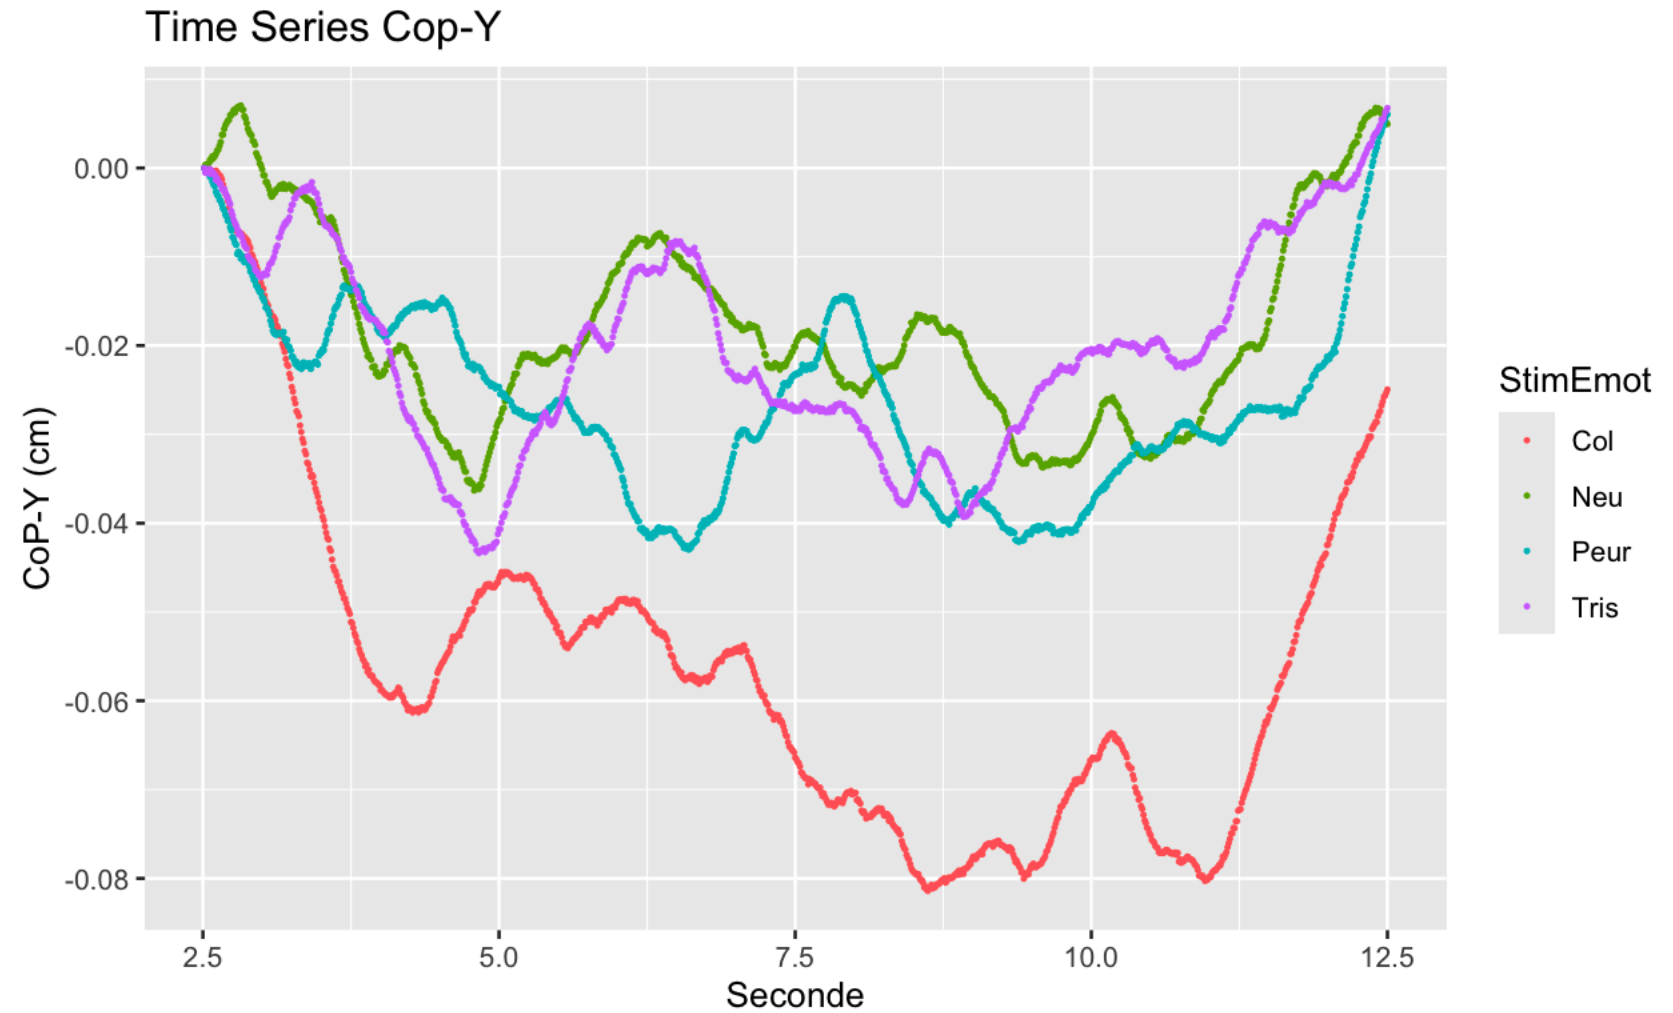

Preprocessing

- **Standardisation:**
Centering on t-0
- **Outlier:** Covariance
Minimum Distance on ML
and AP positions (Leys et
al., 2017) ==> 22
participant exclus

Analytical approach

- **Longitudinal Mixed model** (cluster: participant)

Manipulation check

$M_{\text{correct identification}} = 92.6\%$, $SD = 10.96\%$)

- Type of emotion had an effect on recognition score:
 - Fear and Sadness are less identified than neutral
- Only agreeability moderated this effect:
 - Low Agreeability scores = Worse identification of fear vs neutral

Manipulation Check

Pearson Correlations

	Emotion Recognition
Openess	-.037
Conscientiousness	.03
Extraversion	.006
Agreability	.019
Neuroticism	.013
SPQ Cognitive Perception	-.21
SPQ Desorganisation	-.20
SPQ Interpersonnel	-.19
SPQ General	-.25
Depression	-.1
Anxiété	-.002

Bold correlations indicates significance ($p < .05$)

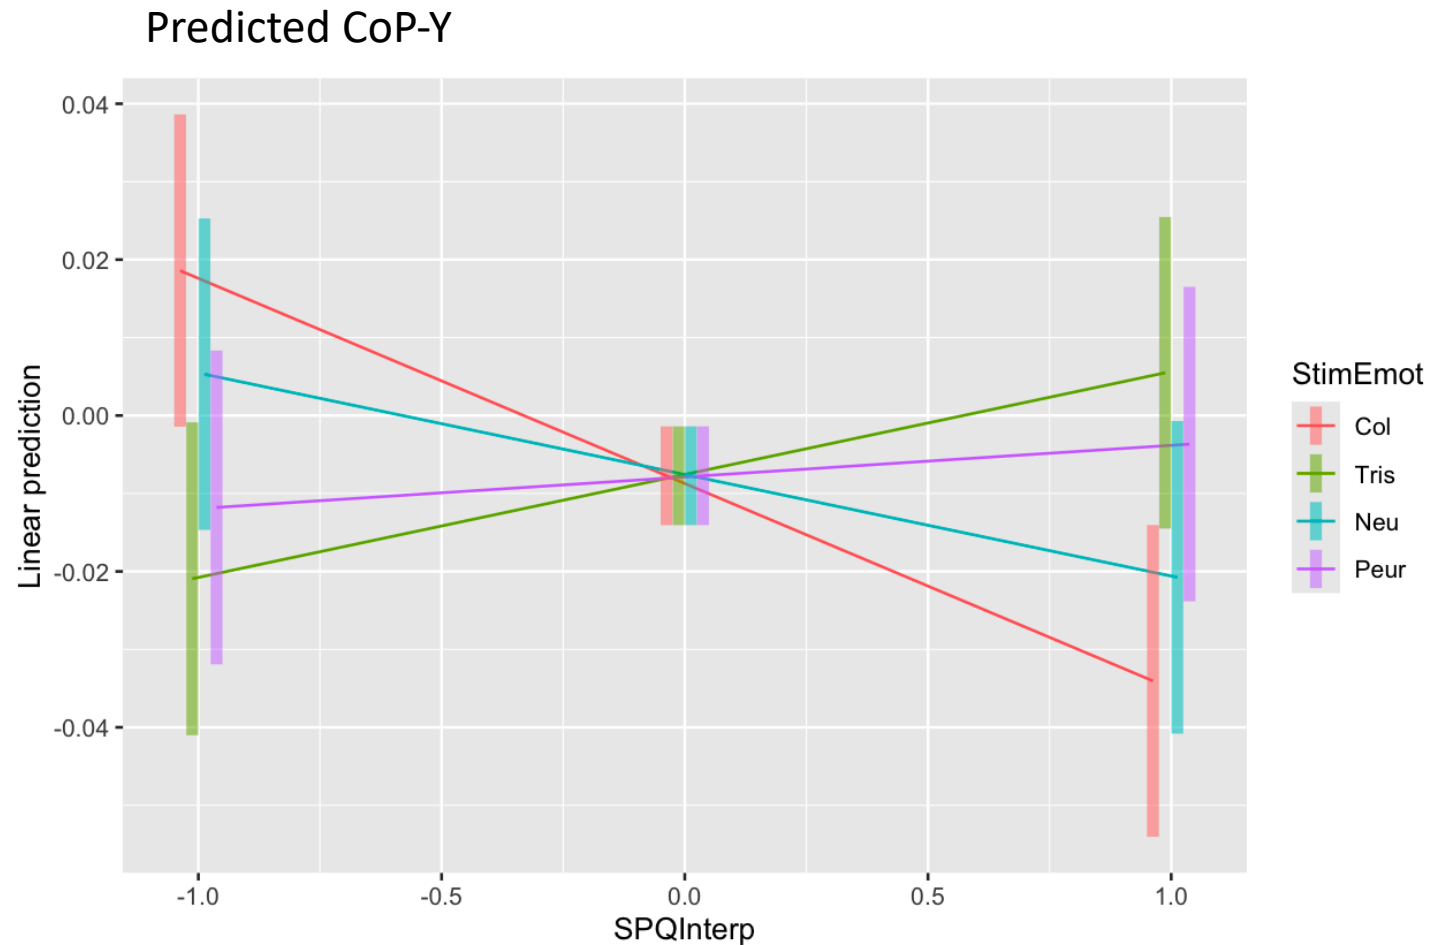

General effects – Emotions

- Main avoidance vs baseline
 - Avoidance of Angry faces
 $B = -0.047, p < .0001,$
 $95\%CI [-0.067, -0.27]$
 - Avoidance of Fear faces ($p = .0008$)
 $B = -0.034, p < .0008,$
 $95\%CI [-0.054, -0.014]$

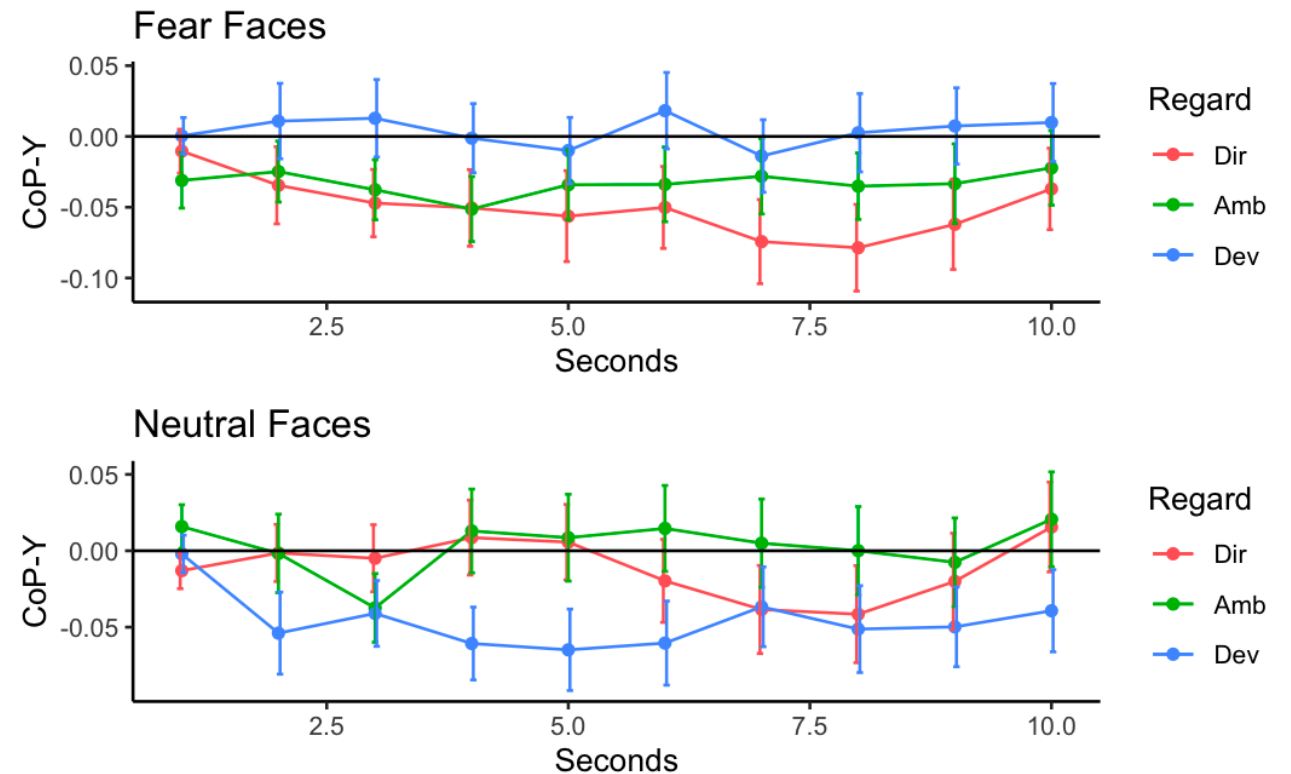

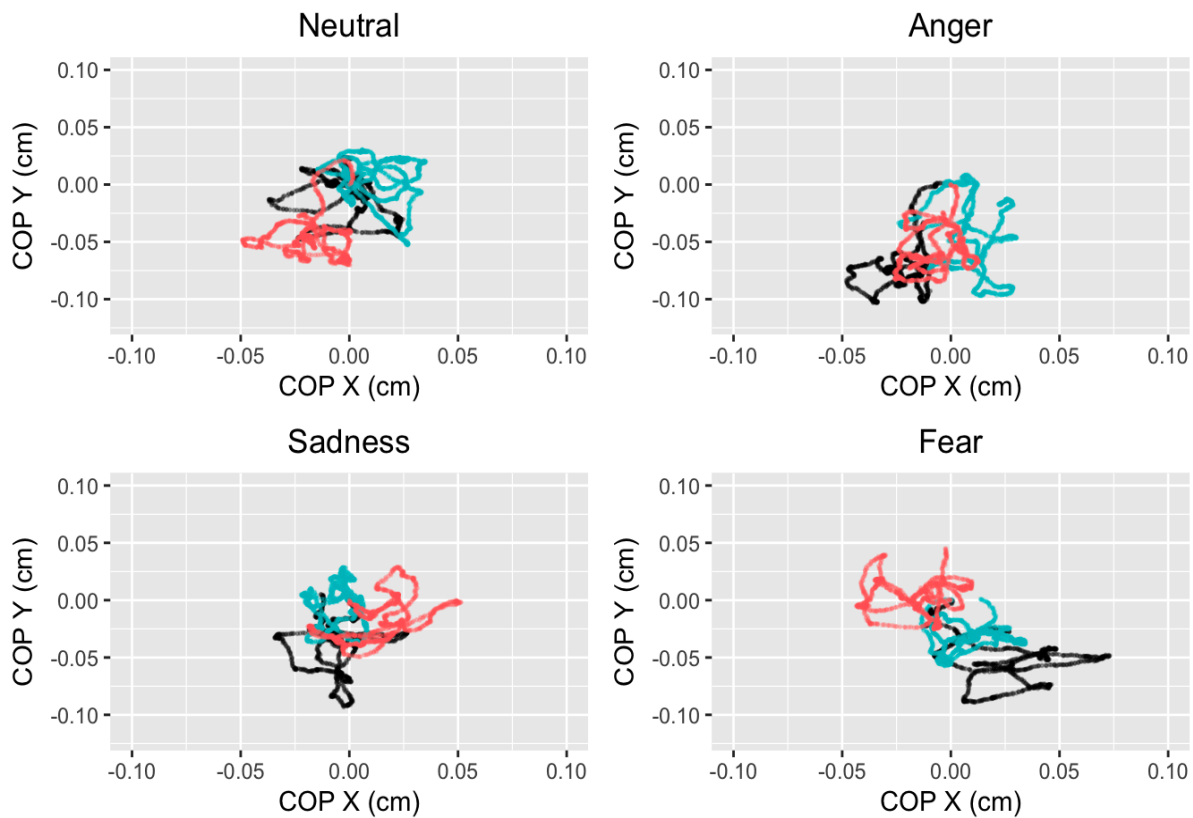

General effects – Personality moderation

- avoidance of anger was moderated by:
 - Openness to experience (reduce avoidance, $p = .04$)
 $B = 0.020$, 95%CI[0.0012, 0.039]
 - Interpersonal dimension of SQP (increases avoidance, $p = .007$)
 $B = -0.026$, 95%CI[-0.045, -0.0073]

General effects – Gaze moderation

- Facial features:
 - Gazes qualified avoidance of Neutral and Fear faces (but not angry or sad faces)
 - Deviated neutral = Avoidance ($p = .032$) but not direct neutral ($p = .88$)
 - Direct Fear = avoidance ($p = .0009$), but not deviated fear ($p = .54$)

Case of Anger (Interactions)

- SCZ interacted with gaze directions to predict reactions to angry faces ($p < .01$)

données

Conclusion

- Emotions influence body sway with anger leading to avoidance
→ *Postural sway can measure responses to social threats*

App pour
explorer les
données

Conclusion

- Emotions influence body sway with anger leading to avoidance
 - ➔ *Postural sway can measure responses to social threats*
 - Gaze direction only influenced reaction to neutral (deviated neutral is avoided) and fear (deviated fear is approached)
 - Deviated neutral = Contempt?
 - Deviated fear = « *threat behing you* »?
- ➔ *Consistent with an appraisal account (vs innate response)*

App pour
explorer les
données

Conclusion

- Emotions influence body sway with anger leading to avoidance

→ *Postural sway can measure responses to social threats*

- Gaze direction only influenced reaction to neutral (deviated neutral is avoided) and fear (deviated fear is approached)
 - Deviated neutral = Contempt?
 - Deviated fear = « *threat behing you* »?

→ *Consistent with an appraisal account (vs innate response)*

- Zooming on angry faces:
 - Neuroticism x gaze:
 - Suggestive evidence for avoidance of direct gazes predicted by neuroticism

→ *Hypersensitivity to threat (vs pseudo threats) for neurotic participants*

- SPQ x gaze:
 - Suggestive evidence for avoidance of deviated anger = **why?...**
